

Eliminating
serious road trauma
by 2050

Background of Charting a Path to Zero Project: Streams at a Glance

Project streams

Austrroads project SAG6365 Charting a Path to Eliminating Road Death and Serious Injury (Charting a Path to Zero) has three work streams:

- **Stream 1: Zero Harm Definition and Current State Assessments** focuses on the Planning for Zero Framework, a blueprint for developing highly effective road safety strategies. The Framework defines the necessary steps to achieve a Safe System End State (SSES), provides benchmarking of systemic risks and safety gaps, and outlines a process for identifying enablers and blockers that will either help or hinder the required change. Stream 1 included a series of 11 recommendations necessary to support jurisdictions in achieving this transformational change.
- **Stream 2: Developing Pathways to Zero and Comprehensive Support Materials** provides guidance on preparing Pathways to Zero, demonstrating how the Framework and its recommendations can be adopted by Austrroads members. It also outlines the communication, engagement, change management, and training support materials required for successful implementation.
- **Stream 3: Identification of Knowledge Gaps and Research Needs** identifies key road safety knowledge and research gaps that must be addressed to achieve Vision Zero outcomes in Australia and New Zealand.

Charting a Path to Zero Streams of Work
